EDUCATION

Bachelor of Science in Electrical Engineering University of California, Riverside Jan 2024 - Expected June 2026

Associates of Science in Computer Science Moreno Valley College Completed Dec 2023

- **GPA:** 3.85/4.0
- **Honors & Awards:** Dean's Honor List all quarters at UCR, Edison STEM Scholarship (2024-2025)

TECHNICAL SKILLS

Software & Programming: GIS, AutoCAD, CRM, Accela, MPulse, New World, MATLAB, Pspice, C/C++, Python, CPAT, Fusion360, ETAP, Excel, Word, Powerpoint, Outlook, Teams, MS Projects

Project Management: Project plan analysis, Insurance, Invoice Batches, Budgeting

Certificates: Engineer in Training (Certificate Number 186361)

EXPERIENCE

MVU Engineering Intern City of Moreno Valley, Moreno Valley, CA Oct 2024 – Present

- Reviewed electrical as-built drawings and updated system documentation for integration into GIS and ETAP, supporting accurate modeling of municipal power distribution networks.
- Designed electrical plans for a solar microgrid, including single-line diagrams, inverter/transformer selection, switchgear layout, conductor sizing, grounding, and construction standards in accordance with NEC and city requirements. With respects to network/communications, low & medium voltage, and lighting (with compliant Title 24)
- Developed electrical infrastructure plans for 10 Level 3 and 10 Level 2 EV chargers, performing load considerations, transformer and distribution panel configuration, and ADA/CBC compliance.
- Automated customer billing workflows by creating a Python script that extracted customer data from XML and generated formatted PDFs, producing 1,200+ bills in under 5 minutes
- Designed and analyzed electrical systems including load calculations, voltage drop analysis, NEC-based conductor sizing, and overcurrent protection for continuous loads, while verifying fault current, interrupting capacity (kAIC), and basic relay coordination

Fleet & Facilities Intern City of Moreno Valley, Moreno Valley, CA May 2023 – Oct 2024

- Coordinated facility electrical repairs and upgrades by reviewing plans, defining contractor scopes, verifying insurance requirements, tracking budgets, and processing invoices.
- Supported project documentation using GIS, AutoCAD, MPulse, and New World to maintain accurate records of electrical systems, equipment layouts, maintenance history, and work orders.
- Drafted Capital Improvement Project sheets for city-owned facility projects, including project scope, cost estimates, schedules, and supporting documentation.
- Managed monthly, quarterly, and annual facility inspections by assigning work orders, tracking completion, and maintaining compliance documentation in MPulse.
- Coordinated follow-up items between internal staff, maintenance teams, and external contractors to support project completion and facility reliability.

Projects

CPAT Load Flow Analysis

- Performed load flow case studies to optimize reactive power and voltage profiles by tuning generator setpoints, capacitor banks, synchronous condensers, and solar resources within system constraints.
- Evaluated equipment loading, system stability, and power factor performance to support safe and efficient distribution operation.
