EDUCATION

Bachelor of Science in Electrical Engineering University of California, Riverside Jan 2024 - June 2026

Associates of Science in Computer Science Moreno Valley College Completed Dec 2023

- **GPA:** 3.85/4.0
- **Honors & Awards:** Dean's Honor List all quarters at UCR, Edison STEM Scholarship (2024-2025)

TECHNICAL SKILLS

Software & Programming: GIS, AutoCAD, CRM, Accela, MPulse, New World, MATLAB, Pspice, C/C++, Python, CPAT, Fusion360, ETAP

Project Management: Project plan analysis, Insurance, Invoice Batches, Budgeting

Certificates: Engineer in Training (Certificate Number 186361)

EXPERIENCE

MVU Engineering Intern City of Moreno Valley, Moreno Valley, CA Oct 2024 – Present

- Reviewed electrical as-built drawings and updated system documentation for integration into GIS and ETAP, supporting accurate modeling of municipal power distribution networks.
- Designed electrical plans for a solar microgrid, including single-line diagrams, inverter/transformer selection, switchgear layout, conductor sizing, grounding, and construction standards in accordance with NEC and city requirements. With respects to network/communications, low & medium voltage, and lighting (with compliant Title 24)
- Developed electrical infrastructure plans for 10 Level 3 and 10 Level 2 EV chargers, performing load considerations, transformer and distribution panel configuration, and ADA/CBC compliance.
- Automated customer billing workflows by creating a Python script that extracted customer data from XML and generated formatted PDFs, producing 1,200+ bills in under 5 minutes.

Fleet & Facilities Intern City of Moreno Valley, Moreno Valley, CA May 2023 – Oct 2024

- Coordinated repairs and upgrades across city-owned facilities by reviewing electrical plans, managing contractor scopes, verifying insurance, and tracking budgets and invoices.
- Supported facilities teams using GIS, AutoCAD, MPulse, and New World to ensure accurate documentation of electrical systems, equipment layouts, and maintenance histories.
- Drafting of CIP Sheets for multiple facilities projects

Projects

CPAT Load Flow Analysis

- Performed load flow case studies to optimize reactive power and voltage profiles by tuning generator setpoints, capacitor banks, synchronous condensers, and solar resources within system constraints.
- Evaluated equipment loading, system stability, and power factor performance to support safe and efficient distribution operation.

Autonomous Organizing RC Car

- Integrated a Slamtec LiDAR with Python on a Raspberry Pi to map 2D environments and execute obstacle-avoidance maneuvers using IMU data and a PID controller.
- Logged encoder and IMU data to CSV and implemented autonomous reverse-path retracing to return the robot to its starting position.

ADDITIONAL INFORMATION

- Eligible to work under ITAR requirements (U.S. citizen).
